

# Environmental Product Declaration

## Vis Storage Systems

CPC Code | 3812  
Declaration Number | S-P-01303  
EPD Valid from | 05.09.2018  
EPD Expire on | 18.04.2021  
Revision Date | 29.07.2019  
Revision Version | 1.1  
Market Coverage | Worldwide

 **EPD**<sup>®</sup>  
TURKEY

ENVIRONMENTAL PRODUCT DECLARATIONS

**KOLEKSİYON**

## In accordance with ISO14025 for Vis Storage Systems

The visual of the product may not be compatible with the product information which is registered.

The environmental impacts of this product have been assessed from cradle to grave.  
Environmental Product Declaration has been verified by an independent third party.

For more information about this Environmental Product Declaration or its content,  
please contact [internationalsales@koleksiyon.com.tr](mailto:internationalsales@koleksiyon.com.tr)

# Information

The LCA for this EPD is conducted according to the guidelines of ISO 14040/44 and the requirements given in the Product Category Rules (PCR) document for Furniture, Except Seats and Mattresses, (ver. 2.0, 2019-06-17) and the general program guidelines by The International EPD System in accordance with ISO 14025 standards.

The inventory for the LCA study is based on the 2017 production figures for Vis Storage Systems manufactured by Koleksiyon Mobilya San. A.Ş. (Koleksiyon) in their production plants located in Tekirdağ, Turkey.

This LCA was modelled with SimaPro 9 LCA software using the impact factors and Ecoinvent database (ver. 3.5) for secondary data and Turkish Life Cycle Inventory Database - TLCID (ver.1.0) developed by Turkish Centre for Sustainable Production Research and Design - SÜRATAM for local data in Turkey.

# Company

Competitive in the global marketplace, Koleksiyon holds to global standards and has internalized the protection principles of natural resources, the environment and the provision of healthy and safe environments for all his employees, partners in all business processes.

The company continuously improves his processes with the integrated management system to ensure the fair balance between efficiency, productivity and safety.

Koleksiyon puts emphasis on internal waste management and facilitating a high level of recycling in all processes with a commitment to continuous improvement.

Using technology, environmentally friendly and recyclable materials when designing products and services, Koleksiyon always aims at protecting the environment as well as human safety. The brand is also willing to ensure that each employee truly knows the importance of his/her contribution towards the green and sustainable environment.

Koleksiyon has a recognized reputation for delivering design and service excellence both in its homeland of Turkey and around the world. The brand is known for its clean and understated intelligent design, for its quality of manufacture and for its insight into the needs and concerns of customers.

Based on its key guiding principles and forty years' experience Koleksiyon designs are based on a profound knowledge of culture, history and geography. Its solutions reclaim the past that we know with colors, sounds and shapes. At the same time, Koleksiyon product designs anticipate the future we do not yet know. The aim is always to pursue excellence and to hold true to certain values. Koleksiyon knows that there is always a line that runs from the past to the future, that as well as local cultures and ideals, there are eternal and universal values that we all share and that what is essential is understanding the art and craft as it is tied up in a particular time and place.

Koleksiyon is compliant to following international standards: ISO 14001 EMS, OHSAS 18001, ISO 9001 QMS, ISO 10002 QM-CS, ISO 50001 EnMS, ISO/IEC 27001 ISMS.

# Product Information

Vis, designed by Studio Kairos, is a very light cabinet which is not constructed as a volume, but rather as horizontal and vertical planes. The “openness” in this work is devised through the constructional detailing.

All the shelves are connected to each other with a chord that runs through the vertical beams. These beams are elliptical in shape, therefore suggesting a strong feeling of direction in placing. During the installation, the direction of each column section is free to the decision of the maker at that point.

One can enjoy a series of interrelations inside the context of the structural system, where the beams all end up pointing at different directions, thus creating the unique dynamism for each and single cabinet.

In this respect, Vis can be used as a storage, display and moreover as a partitioning element between neighbouring zones that accommodate different performances. The richness carries on with the selection of colours for the vertical panels, all in unison, in a mono chromatic tone or various hues. It can create another level of dynamism, after the disorderly placed, beige-white vertical beams.

## LIST OF MATERIALS FOR VIS STORAGE SYSTEM

MATERIALS		CONTENTS (kg)
Main Body	Wood	135
	Steel	3.80
	Aluminium	11.8
Auxiliary Materials	PVC	3.51
	Steel	3.61
	Paint	16.6
Main or Auxiliary	Steel	0.134
	PVC	0.240
Fittings	Steel	0.420
	PVC	0.216
Packaging Materials	Corrugated Board	26.5
	PE	1.76

# System Boundary

## Upstream Process

Upstream processes include raw material extraction and production processes and manufacturing of auxiliary materials, chemicals and packaging materials.

## Core Process

Core processes include transport of materials to the manufacturer and operations for manufacturing.

Manufacturing includes sizing and painting of product parts and assembly. The end products are then packaged to be sold. Electric energy and natural gas are consumed during manufacturing.

## Downstream Processes

Downstream processes include transportation from manufacturer to consumer, product use and disposal of both product and packaging.

Distribution of final product to customer is assumed to be a default long distance transport of 1000 km by lorry defined by the PCR.

During use phase of the product, no energy or water is consumed. The product can be cleaned with a dry or damp cloth and do not require maintenance during its lifetime.

At the end of its life, it is expected from customers to dispose the product in accordance with the legal regulations of the country where they reside. The product is easy to disassemble and recycle. For the disposal scenario of the product European average recycling values were taken for steel, aluminium and plastic parts as 83%, 90% and 69.2% respectively. Other materials assumed to end up at landfill.

Packaging waste is assumed to end up at packaging recycling streams due to the relevant national law in Turkey in 2017, which requires manufacturers to have certain percentage of their packaging waste to be recovered.

## SYSTEM BOUNDARY OF THE LCA STUDY CONDUCTED

# Environmental Performance Related Information

<b>FUNCTIONAL UNIT / DECLARED UNIT</b>	The declared unit is the production of one unit of furniture with a minimum 15 years lifetime.
<b>GOAL AND SCOPE</b>	This EPD evaluates the environmental impacts of one unit of furniture from cradle to grave life cycle perspective.
<b>SYSTEM BOUNDARY</b>	The system boundary covers upstream, core and downstream processes within the life cycle.  There are no additional product scenarios developed for this EPD. Distribution of final product to customer is assumed to be 1000 km by lorry. During use phase of the product, no energy or water consumption is assumed. At the end of its life, it was assumed that the metal parts of the product were recycled according to the European average recycling rates and the rest of the materials end up at landfill.
<b>ESTIMATES AND ASSUMPTIONS</b>	Packaging waste for declared products are modelled based on the collection rates enforced by Packaging Waste Control Regulations of 27.12.2017 and No. 30283.
<b>CUT-OFF RULES</b>	For this LCA study, no cut off criteria was applied.
<b>BACKGROUND DATA</b>	TLCID, ver 1.0, Turkey. Ecoinvent, ver. 3.5, Switzerland
<b>DATA QUALITY</b>	Raw materials, electricity, natural gas, water use and waste data collected from Koleksiyon. Localized data especially on energy and other relevant processes were taken from TLCID Database.
<b>PERIOD UNDER REVIEW</b>	All primary data collected from Koleksiyon plant is for the period year of 2017.
<b>ALLOCATIONS</b>	There are no co-products in the production of Vis Storage System manufactured by Koleksiyon. Hence, there was no need for co-product allocation. Use of energy per unit of furniture is allocated based on the time spent in the manufacturing line from yearly energy consumption of each workshop. Koleksiyon sources raw materials and goods from different locations across Turkey and other parts of the world and by different means of transport (truck, ship and train). For this reason, transport was allocated according to tonnages.

All the waste resulting from the main production and related processes of Koleksiyon is managed in accordance with valid legal requirements.

The results of the LCA with the indicators as per EPD requirement are given in the following tables for upstream, core and downstream processes shown in the system boundary section.

Global warming potential (GWP) for time span of 100 years, acidification potential with time span of eternity and eutrophication potential with time span of eternity were calculated using CML-IA baseline (August 2016, ver. 4.7),

Formation potential of tropospheric ozone photochemical oxidants with time span of 5 days was calculated using ReCiPe 2008 Midpoint (H) (ver. 1.13),

Renewable and non-renewable energy consumption were calculated using Cumulative Energy Demand (November 2018, ver. 1.11),

Human toxicity (cancer and non-cancer) and ecotoxicity were calculated using USEtox 2 (recommended + interim), July 2016, ver. 1.00),

Land use as sum of agricultural land occupation, urban land occupation and natural land transformation was calculated using ReCiPe 2016 Endpoint (H) (ver. 1.03, September 2018)

Water scarcity potential was calculated using AWARE (ver. 1.02).

All resource use values are determined from life cycle inventory of products as renewable and non-renewable resources. The direct amount of water used by core processes reflects the net fresh water consumption during manufacturing for the declared product.

## ENVIRONMENTAL INDICATORS

RESOURCE USE						
Parameter	Unit	Upstream Processes	Core Processes	Downstream Processes	Total	
<b>NON-RENEWABLE RESOURCES</b>						
<b>Material</b>	Calcite	[kg]	14.5	0.978	0.724	16.2
